

# REEDY FORK ORGANIC FARM

## FEEDING GUIDE FOR OUR TOP 5 FEEDS

### Starter Feed

- ◇ 1 bag of our Organic Chick Starter feed will properly start 100 chicks.
- ◇ Layer Chicks should be fed our organic feed for the first 8 weeks of their lives.
- ◇ Broiler chicks should eat starter feed for at least the first 3 weeks of their lives.

### Pullet Feed

- ◇ Start feeding your young Layer chickens pullet feed once they are 9 to 16 weeks old.
- ◇ Your chicks will stay on this feed until they start laying, which is typically around 16 to 17 weeks.
- ◇ Each chick will eat approximately 14lbs of feed between weeks 6 to 16.

### Layer Feed

- ◇ Convert your chickens to layer feed when they are 16 or 17 weeks old or when you see the first egg.
- ◇ We recommend that light layers that weigh between 4 to 4.5lbs eat 4 to 5 ounces of feed per day.

### Broiler Grower Feed

- ◇ Convert your Broiler chickens to Broiler Grower feed until the desired body weight is achieved.
- ◇ The average broiler will eat approximately 25lbs of feed in its life time.

### Goat Feed

- ◇ Feed your goats approximately 1-2 lbs of our organic feed per day for maintenance depending on their body condition.
- ◇ By feeding 1-2lbs of feed per goat approximately 1 quart to 1 gallon or more of milk will be produced per day, depending on how good your dairy goat is!

This feeding guide is only an estimate of what you should feed your livestock in ideal environments. Results vary depending on the quality of living conditions, including weather, stress, and management. Always have feed and clean water easily accessible to your livestock.
